Question 1

Heat Loss through a composit wall

A 3 m high and 5 m wide wall consists of long 32 cm 22 cm cross section horizontal bricks ($k = 0.72 \text{ W/m} \cdot ^\circ\text{C}$) separated by 3 cm thick plaster layers ($k = 0.22 \text{ W/m} \cdot ^\circ\text{C}$).

There are also 2 cm thick plaster layers on each side of the brick and a 3-cm-thick rigid foam ($k = 0.026 \text{ W/m} \cdot ^\circ\text{C}$) on the inner side of the wall.

The indoor and the outdoor temperatures are 20°C and 10°C , and the convection heat transfer coefficients on the inner and the outer sides are $h_1 = 10 \text{ W/m}^2 \cdot ^\circ\text{C}$ and $h_2 = 40 \text{ W/m}^2 \cdot ^\circ\text{C}$, respectively. Assuming one-dimensional heat transfer and disregarding radiation, determine the rate of heat transfer through the wall.

$$\begin{aligned} R_{1,\text{conv}} &= 1/h_1 * A_{1-\text{dim}} = 1/10 * (0,015 + 0,22 + 0,015) * 1 = 0,4 \text{ } ^\circ\text{C}/\text{W} \\ R_{\text{foam}} &= L_{\text{foam}}/K_{\text{brick}} * A_{1-\text{dim}} = 0,03/0,026 * (0,015 + 0,22 + 0,015) * 1 = 4,615 \text{ } ^\circ\text{C}/\text{W} \\ R_{\text{plaster1}} &= L_{p1}/K_p * A_{p1(1-\text{dim})} = 0,32/0,22 * 0,015 * 1 = 96,97 \text{ } ^\circ\text{C}/\text{W} \\ R_{\text{plaster2}} &= L_{p2}/K_p * A_{p2(1-\text{dim})} = 0,32/0,22 * 0,015 * 1 = 96,97 \text{ } ^\circ\text{C}/\text{W} \\ R_{\text{bric}} &= L_{\text{brick}}/K_{\text{brick}} * A_{\text{brick}(1-\text{dim})} = 0,32/0,72 * 0,22 * 1 = 2,02 \text{ } ^\circ\text{C}/\text{W} \\ 1/R_{\text{total-parallel}} &= 1/R_{\text{plaster1}} + 1/R_{\text{brick}} + 1/R_{\text{plaster2}} = 1/96,97 + 1/2,02 \\ &+ 1/96,97 = 0,516 \text{ W}/^\circ\text{C} \\ \text{i.e., } R_{\text{total-parallel}} &= 1/R_{\text{total-parallel}} = 1/0,516 = 1,94 \text{ } ^\circ\text{C}/\text{W} \\ R_{\text{plaster left}} &= R_{\text{plaster right}} = \\ L_p/k_p * A_{p(1-\text{dim})} &= 0,02/0,022 * (0,015 + 0,22 + 0,015) * 1 = 0,363 \text{ } ^\circ\text{C}/\text{W} \\ R_{2,\text{conv}} &= 1/h_2 * A_{1-\text{dim}} = 1/40 * (0,015 + 0,22 + 0,015) * 1 = 0,1 \text{ } ^\circ\text{C}/\text{W} \\ R_{\text{wall total}(1-\text{dim})} &= R_{1,\text{conv}} + R_{\text{foam}} + R_{\text{plaster left}} + R_{\text{total parallel}} + R_{\text{plaster right}} + R_{2,\text{conv}} = 0,4 + 4,615 + 0,363 + 1,94 \\ &+ 0,363 + 0,1 = 7,781 \text{ } ^\circ\text{C}/\text{W} \\ \dot{Q} &= T_1 - T_\infty/R_{\text{wall total}} = 20 - (-10)/7,781 = 3,86 \text{ W} \\ \text{We have already calculated the } R_{\text{wall total}} &\text{ with the thickness of the wall like a 16 mm} \\ R_{\text{wall total}} &= 6,81 \text{ } ^\circ\text{C}/\text{W} \\ \dot{Q} &= T_1 - T_\infty/R_{\text{wall total}} = 20 - (-10)/6,81 = 4,41 \text{ W} \end{aligned}$$

Comment

We see that between the two results there isn't so much difference, because there isn't a significantly increase of thermal resistance of the wall between the 16 cm and 32 cm thickness of brick, so the rate of heat transfer doesn't have a significantly decrease in the wall with a thickness of 32 cm.

Question 2

– Find the two R_{unit} values

A wall with wooden frame built around 38 mm 90 mm wooden pins with a distance from center to center of 400 mm. The 90 mm wide cavity between the studs is filled with fibreglass insulation. The interior is finished with a 13 mm plasterboard panel and the exterior with a 13 mm wood fibre panel and a 13 mm beveled conical fitting of 200 mm. The insulated cavity accounts for 75% of the heat transmission area, while the pins, plates and window sills account for 21%. Headers make up 4% of the area and can be treated as studs.

	Wood	Insulation
Outside air	0,03	0,03
Wood bevel (13*200mm)	0,14	0,14
Plywood (13mm)	0,11	0,11
Urethane Rigif Foam (90mm)	X	0,98*90/25=3,528
Wood Studs (90mm)	0,63	X
Gypsum board (13mm)	0,079	0,079
Inside surface	0,12	0,12

$$\begin{aligned} R_{\text{with wood}} &= (0,03+0,14+0,11+0,63+0,079+0,12)= 1,109 \text{ m}^2\text{ } ^\circ\text{C}/\text{W} \\ R_{\text{with insulation}} &= (0,03+0,14+0,11+3,528+0,079+0,12)= 4,007 \text{ m}^2\text{ } ^\circ\text{C}/\text{W} \end{aligned}$$
